

Wyke Solar Farm

The Need for Solar

Reaching for Net Zero

The UK has made a **legally binding commitment to achieve a net zero fully decarbonised power system by 2030**. This can only be achieved with the adoption and roll-out of reliable, affordable, clean energy sources such as solar.

Dorset Council Climate Emergency

Dorset Council declared a climate emergency in May 2019, and they have pledged to become **carbon neutral by 2040**. Solar farms, such as Wyke Solar Farm, will make a meaningful contribution to the local, and national, climate commitments.

Tackling Energy Security and the Cost of Living Crisis

Solar energy provides **one of the cheapest forms of electricity in the UK**. This year alone solar has been more than four times cheaper than gas and two times cheaper than nuclear in the UK. A **fivefold increase in solar capacity** is anticipated by 2030 in the Government's Energy Security Strategy 2022. If approved, Wyke Solar Farm can help drive down bills and tackle the energy crisis.
